

Demystifying AI for Educators

Virtual Component

Self-paced online module delivered via LMS. Available in Arabic and English. Includes interactive segments, embedded video explainers, and knowledge checks.

Topics

- What is AI? Definitions, types, and how it works
- AI vs machine learning vs generative AI vs automation vs AI agents
- Opportunities and limits of AI in school contexts
- Where AI supports teachers and where human judgment remains essential
- Using LLMs to generate outputs using training data, tokens, and next-token prediction

Exercises & Activities

- "AI or not AI?" classification exercise
- Myth vs fact matching activity
- Opportunity scan for common teacher tasks
- AI vocabulary builder with educator examples

Learning Outcomes

- Define AI in clear, educator-friendly language
- Distinguish between AI, machine learning, generative AI, automation, and AI agents
- Identify realistic opportunities and limits of AI in school contexts
- Recognise where AI supports teacher work and where human judgment remains essential

Applied Output

- ✓ Personal AI Opportunity Map

Assessments & Quizzes

- Pre-module knowledge check
- Multiple choice and scenario-based quiz
- Drag-and-drop concept matching activity
- Formative checkpoint: identify 3 appropriate and 3 inappropriate school uses of AI
